VIVID™
COLLECTION

Bold Design. Bolder Sizes.

When dramatic sizes, durability, performance, and energy efficiency are your top priorities, go boldly with the Marvin Vivid collection. Vivid products feature low-maintenance beauty, thanks to our innovative, proprietary Ultrex® fiberglass. A wide range of sizes and configurations—and a refined fit and finish—make Vivid an inspired choice for transitional to contemporary projects.

Why Materials Matter

Proprietary Ultrex Fiberglass

Innovative Ultrex® fiberglass was pioneered by Marvin as one of the first premium composites on the market.

Ultrex fiberglass features high-density woven fibers bound by a thermally set resin, making it much more resistant to pressure and temperature shifts than wood-vinyl composites.

Fiberglass Reinforced Composite

Used exclusively on Vivid™ window interiors, a proprietary fiberglass reinforced composite features a premium acrylic-based finish for low-maintenance beauty that lasts.

EXTERIOR
Proprietary Ultrex Fiberglass

INTERIOR
Fiberglass Reinforced Composite

Strength

The strength of Ultrex fiberglass translates into long-term ease of operation, minimal maintenance, and superior performance.

Stability

By expanding and contracting at nearly the same rate as glass, Marvin windows and doors made with Ultrex fiberglass are more resistant to leaks and seal failures.

Finish

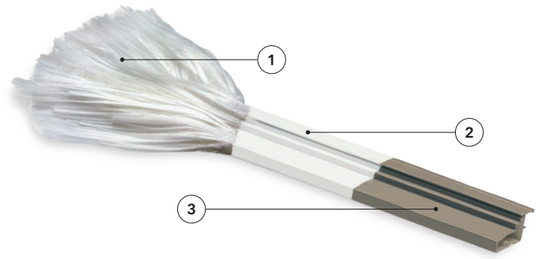

The proprietary acrylic finish is 3x thicker than competitive painted options, and resistant to chipping, chalking, or fading.

Energy Efficiency

Ultrex fiberglass combined with energy-efficient glass options can help manage the amount of light and heat entering and leaving your home.

How It's Made

Ultrex fiberglass is a composite material made of fine glass fibers woven into a cloth then bonded together with a formulated polyester resin. The continuous strands of fiberglass give Ultrex its strength in resisting breakage.

1

Raw Fiberglass Strands
Thin strands of strong glass cables are saturated with specifically compounded resins.

2

Pultruded Fiberglass
The strands are pulled through a heated die and cut with diamond-edged blades to form Ultrex fiberglass.

3

Proprietary Acrylic Finish
A proprietary acrylic finish is then applied; it's smoother and 3x thicker than other brands.

Strength Matters

Ultrex fiberglass is 8x stronger than vinyl and has a low thermal expansion rate. It is heat resistant, non-corrosive, and has low conductivity.

Ultrex fiberglass bends and flexes less than vinyl. This helps maintain the window seals and operation year after year.

The strength of Ultrex fiberglass allows for a reduced frame thickness that supports more visible glass, creating a larger view.

Durable material weathers better against everyday wear and stands the test of time.

ULTREX FIBERGLASS IS

8x
stronger than vinyl

3x
stronger than Fibrex®

More Glass, More Value

This resistance to bending means we can reduce the frame thickness without impacting the window's structural integrity. This allows for more glass, expansive views and daylight openings, and less window frame.

Ultrex fiberglass provides larger views

Thicker vinyl profiles can restrict views

Stability You Can Count On

Constant expansion and contraction can gradually break down windows and doors, causing leaky seals, poor operation, and loss of structural integrity.

Ultrex® fiberglass expands and contracts at virtually the same rate as glass, so Marvin Vivid™ windows and doors stay tight and true over time, resisting air leaks, seal failures, and stress cracks that can compromise energy efficiency and long-term performance.

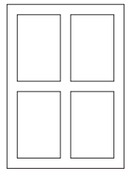

This low rate of expansion and contraction also allows windows and doors to open and close on demand without sticking or binding from swelling, warping, material distortion, or deformation from the heat.

ULTREX FIBERGLASS HAS

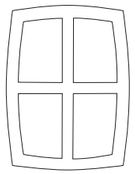

75%
less expansion than Fibrex®

87%
less expansion than vinyl

IN EXTREME WEATHER CONDITIONS

Ultrex fiberglass
stays true

Vinyl
can expand

A Long-Term Finish

Marvin Ultrex fiberglass finish is verified to the American Architectural Manufacturers Association (AAMA) 624 specification. Achieving AAMA 624 verification means that our finish has passed rigorous tests that simulate the harsh conditions encountered throughout the life of a window or door.

Ultrex fiberglass uses an acrylic finish that is paintable, fade resistant, and virtually maintenance free. With a finish that's 3x thicker than competitive painted options, it resists chipping, denting, and peeling.

Lasting Performance

Proprietary Ultrex fiberglass finish resists scratches, chalking, and fading—even in dark colors

Exteriors can be painted to match any home

Virtually maintenance free—no sanding, scraping, or painting care needed

Finish is 3x thicker than competitive painted options

Energy Efficiency

The low thermal conductivity and superior performance of Ultrex fiberglass combine with a selection of energy-efficient glazing (glass) options that help manage the amount of light and heat entering and leaving your home.

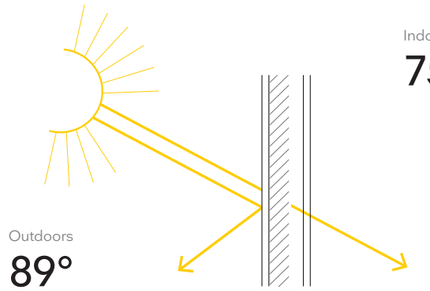

Top-Rated Efficiency

Windows and doors with low conductivity reduce heat loss in homes, which translates to lower energy bills.* Ultrex fiberglass provides an insulated barrier against extreme weather temperatures, keeping homes comfortable and reducing heating and cooling costs.

Energy Savings

Low-E glass coatings are designed to reflect heat, keeping homes cooler in the summer and warmer on winter nights while also blocking harmful UV rays and reducing energy costs.

SUMMER DAY — LOW-E GLAZING

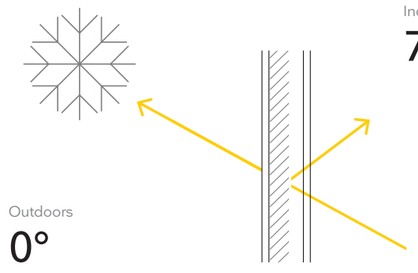

Low-E coatings have three main functions:

Insulation (energy efficiency)
By reflecting heat, the coating significantly reduces solar heat gain in summer and heat loss in winter, helping to maintain a stable indoor temperature.

Solar Control (heat gain reduction)
In warm weather, the coating reflects short-wave infrared energy from the sun away from the building, which helps keep indoor spaces cooler by blocking solar heat gain.

UV Protection (reduces UV damage)
The coating reduces a significant percentage of harmful UV rays, helping prevent fading of furniture, rugs, and other interiors.

WINTER NIGHT — LOW-E GLAZING

* Replacing old windows with ENERGY STAR certified windows lowers household energy bills by an average of up to 13% nationwide when replacing single-pane windows. Lower energy consumption also reduces greenhouse gas emissions from power plants and homes.

Easy to Order, Simple to Install

The Vivid collection offers a range of standard sizes, along with bold custom sizes to make the order process straightforward. Easy window installation begins with a solid flat frame for convenient shimming and alignment. Other advantages include a rigid window nailing fin with mitered corners, streamlined field mulling, and the ability to mull within the rough opening with mull reinforcement (MRF).

Full Warranty Coverage

A family-owned and -led company with a legacy of innovation since 1912, Marvin backs its products with industry-leading warranties. The Vivid collection is backed by a fully transferable 20/10 warranty, 20-year coverage on glass, and 10-year coverage on manufacturing materials and workmanship.

Windows

Choose from Casement, Awning, Direct Glaze, and Specialty Shape windows to complement your project's architectural style.

FEATURES

Invite more natural light into your home with bold maximum sizes, including widths up to 3'6" and heights up to 8'

Certified to standard performance ratings up to PG50 for air, water, and structural integrity

Excellent energy performance, with options to meet or exceed ENERGY STAR® V7 throughout the United States

Superior strength and durability over vinyl cladding, roll-form aluminum, and wood/vinyl composites

Proprietary Ultrex fiberglass exteriors and reinforced fiberglass composite interiors

A proprietary AAMA 624-verified acrylic finish resists fading and scratches, even in darker colors. Plus, Vivid products stay beautiful over time with very little maintenance.

Every detail is aesthetically smooth and clean, thanks to engineered components that eliminate overlapping materials or joint welds

Coordinating picture windows also available

Interior screen features an aluminum surround and concealed pressure mounting points for ease of operation and enhanced aesthetics

Awning

Marvin Vivid™ Awning windows have a single sash hinged at the top of the frame. The sash swings out from the bottom, using a manual handle. Position them high on the wall as privacy windows or in concert with matching windows as complementary sources of light and fresh air.

Divided Lites

The look of multiple individual panes of glass is popular in a wide range of architectural styles. Simulated Divided Lites (SDLs) and Grilles-Between-the-Glass (GBGs) mimic the look of these individual panes of glass without sacrificing energy efficiency. Divided lites available on select Vivid products.

Grilles-Between-the-Glass

GBGs are available in several popular lite cut options for a classic divided lite look and easy glass cleaning.† Available in Ebony and Stone White interior and Ebony, Bronze, Pebble Gray, and Stone White exterior.

Simulated Divided Lite

These bars permanently adhere to both sides of the glass for a more authentic look. Available with spacer bar and in several lite cut options.†

GRILLES-BETWEEN-THE-GLASS

SIMULATED DIVIDED LITE

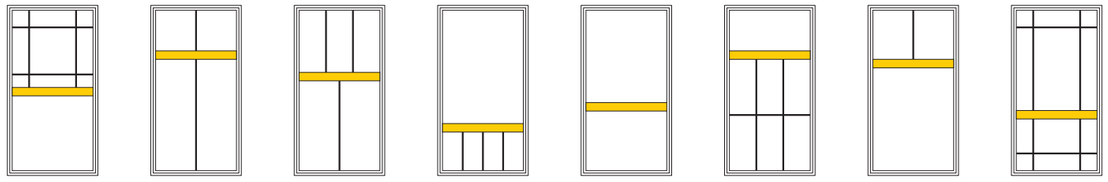

* Argon gas not available in high elevations where capillary tubes are required
† For more options, visit marvin.com

Simulated Checkrails

Simulated checkrails are the perfect solution when aesthetics call for the beauty of a double hung, but operation, egress, or performance demand another solution. Specify placement of the horizontal simulated checkrail bar and the lite cut patterns above and below.

These illustrations offer a sampling of ⅞" SDL patterns that can be selected in combination with the 2" simulated checkrail on Casement, Awning, Direct Glaze rectangle, and Picture windows.*

Simple and Efficient Installation

Marvin Vivid™ windows and doors bring together design, quality, and performance in one streamlined collection. Vivid products offer a number of installation options and accessories that make it easy to meet project demands.

Nailing Fin

Pre-attached rigid nail fin for easier installation

Factory-Applied Jamb Extensions

Factory-applied jamb extensions save time and labor. We supply 4-⅝", 6-⅝", and 6-13⁄16" jamb depth in White and Designer Black.

Factory-Installed Screens

Factory-installed screens are a standard offering with operating windows. At no extra cost, we can ship your screens separately to reduce on-site damage prior to installation.

Corner Keys

Integral corner keys keep window and door units square and corners sealed.

Through-Jamb

Available through-jamb and masonry bracket options.

Paintable Interior and Exterior

Ultrex fiberglass exterior and fiberglass reinforced composite interior are paintable and hold their colors better than vinyl or vinyl/wood composites

Factory-Mulled Assemblies

Available with standard factory mulling, reinforced factory mulling, or Prep for Field Mulling. The reinforced mull meets **AAMA 450 specifications** and performs up to PG50 on standard products.

Custom Sizes

Custom sizes are available on windows and doors in 1⁄64" increments for the perfect fit every time.
